05/12/2023	424
05/13/2023	1039
05/14/2023	350
Total	**3376**

Highlights:

• Received Datadog alerts (**PROD Molecule Node - Atom Status Problem**) for 7 nodes , recovery email received within 10 minutes. This was due to the production cluster reboot to increase the runner heap size from 6GB to 10GB

• Received an alert for **POS208** , recovered by the support team

• Due to Aptos downtime, the long running processes (**POS027,POS025, POS024**) were identified and notified via Teams/Pager

• Received Datadog alert (**PROD Molecule Node: Usable Memory Decrease**) for the 2nd node. This was due to multiple processes were running on that particular node.

• No alerts were received during **Boomi Maintenance(USA East Hub and Canada Hub Clouds)** from 12:00 AM to 01:00 AM PST

• Identified and shared the list of alerts/process failures to be added to the Process monitoring playbook - In Progress.
